

Supplementary Table S3. Period of tracking the COVID-19 PCR test from the date of diagnosis

Variant	Periods from diagnosis to the last PCR, day	95% confidence interval
Non-Delta	26.94±20.60	21.83–32.04
Delta	19.55±15.86	16.89–22.22
Omicron	16.20±8.13	12.40–20.00

Values are presented as mean±standard deviation. Levene's statistical significance based on the mean ($p=0.072$) and median ($p=0.126$). Bonferroni's method: non-Delta–Delta, $p=0.003$; non-Delta–Omicron, $p=0.031$; Delta–Omicron, $p=1.000$. COVID-19: coronavirus disease 2019; PCR: polymerase chain reaction.
