Supplementary Table S2. Predictive performance of FeNO, eosinophils, and IOS parameters for asthma exacerbation

Variable	OR (95% CI)	p-value	AUROC
Model 1: FeNO+Eosinophil			0.582
FeNO (per SD)	0.90	0.666	
Eosinophil (per SD)	1.43	0.114	
Model 2: AX+FeNO+Eosinophil			0.703
AX (per SD)	2.11 (1.28–3.50)	0.0035	
FeNO (per SD)	NS	0.861	
Eosinophil (per SD)	NS	0.144	

Values are presented as standardized (per 1 SD increase).
FeNO: fractional exhaled nitric oxide; IOS: impulse oscillometry; OR: odds ratio; CI: confidence interval; AUROC: area under the receiver operating characteristic curve; SD: standard deviation; AX: area of reactance; NS: not significant.
